/Solution Brief

Email Encryption Service for use with Google Apps™ Service Subscriptions

DataMotion™ SecureMail for Google Apps™ Service allows encrypted email and file attachments to be sent from Gmail™ webmail service without the need to install special apps or exchange encryption keys. Organizations can use the SecureMail service with Google Apps™ Service subscriptions to easily and safely exchange sensitive emails and files with customers, business partners and vendors while maintaining compliance with privacy regulations.

Features
Strong, compliance grade encryption for email content and file attachments
Leverages Google Apps™ content filtering (DLP) systems to route sensitive messages
100% compatible with on-premise or cloud-based archiving systems
Automated account provisioning for your message and file recipients
On-demand and automated reporting for all secure transactions
Includes SecureContact.me signature line link for receiving encrypted messages and files from anyone
Step-by-step setup guide for quick service startup and operation

Benefits
Respond quickly to secure messaging needs through fast, and easy integration into Google Apps™.
Improves service and contains costs with secure email speed and cloud computing efficiency
Reduces exposure to regulatory violations by encrypting Google Apps™ emails and file attachments
Lowers business risk and protects your brand and reputation by preventing data leaks
Increases customer loyalty and trust by protecting their sensitive information with encryption

How It Works

The diagram below provides an illustration of how easily SecureMail is integrated with Google Apps™ Service subscriptions.

The content filter provided as part of the Google Apps™ Service solution flags the message as secure based on a pre-defined criteria, such as special characters in the subject line or a data pattern inside the message considered sensitive or confidential. Once the message is marked as secure, it is sent via TLS to DataMotion SecureMail cloud, which securely delivers the message to the recipient using a web-link where the encrypted message and files can be easily retrieved, and replies initiated.
